TEMPE PLANNING AND ZONING COMMISSION/CITY COUNCIL 11.8.90 PUBLIC INFORMATION SHEET: TEMPE STANDARD SHARED PARKING MODEL

Chapter 6 (Parking) of Tempe's Zoning Ordinance refers to Tempe's "Standard Shared Parking Model" that can be used as a basis for predicting the Parking Demand for a particular mix of uses on a site. The model assumes that every separate use will actually need the full amount of parking that is called for by the ratios in the Ordinance at some point (called the "peak" period for the use) during the day. For example, in the real world, some uses (like nightclubs) peak in the evening; others (like offices) peak in the morning or afternoon. Where different uses need parking at different times of the day, there is an opportunity for them to share parking. This means that the total number of stalls needed to serve a "mixed use" site (the Parking Demand) may be significantly less than the number of stalls that would have to be built if each of the uses had to provide parking on its own (the Parking Required by Ordinancethis Code).

The Standard Shared Parking Model is a tool for estimating the Parking Demand of a specific mix of uses. It is called "standard" because each of the demand curves represents the parking needed for an average, typical use, based on studies and observations collected by staff over a number of years. The "curves" are represented below as a table showing the percent of the Ordinance Code requirement for sixteen groups of such uses, by hour of day.

These curves can be adapted to fit the specific needs of a major tenant on the site. The advantage of doing this is that the mode will be more accurate in predicting that tenant's share of the parking throughout the day. The disadvantage is that the model will be unique, and may not work as well if that tenant is replaced by an average, typical user in the future. In addition to changing the curves, one might also consider the impact of transit availability (reliable mass transit serving the site), trip reduction programs (van and carpooling, etc.) and captive market effects (where users serve patrons who are already on site), as well as any users who might need more parking than Ordinance the Code ratios require. Any modifications to the standard model should be based on a "professional parking analysis and management study", as described in a companion information sheet available from the Planning Development Services Department.

Enclosed: Instructions on how to apply model.

PUBLIC INFORMATION SHEET: PARKING ANALYSIS AND MANAGEMENT STUDY

Section <u>4-604</u> of Tempe's Zoning <u>Ordinance & Development Code</u> refers to submittal of a professional Parking Analysis and Management Study where applicant is basing his parking on the predicted demand, rather than on the amount required by <u>OrdinanceCode</u>. To assist in the process, staff has prepared a more detailed description of the elements in such a Study, in a format that could be adapted as needed for each site:

"professional":

The study should be stamped by a Professional Engineer who is registered in the State of Arizona and who has extensive experience with traffic and parking issues in private development. The consultant's qualifications should be briefly described in the study.

"analysis":

A review of the existing and proposed parking conditions on the site, including:

- (a) A brief history of the phases of site development, with details of City approvals of variances, use permits, etc.
- (b) An overview of any parking problems that currently exist on the site, based on personal interviews with tenants, managers and owners, and on direct observations and counts by the consultant.
- (c) A comparison of the parking required by Ordinance Code with the parking provided, both for current and proposed uses on the site.
- (d) An estimate of the parking demand for the site, along with the methodology (tables, graphs, assumptions, etc.) supporting that estimate.
- (e) A discussion of the probable scenarios and problems that will need to be addressed if the parking is provided in relation to demand, as proposed.
- (f) Any special conditions to protect the public interest recommended by the consultant if the project is approved as proposed.

"management"

A summary of all implementation strategies needed to deal with the anticipated problems mentioned in (e) above, promoting any or all of the following, for example:

(1) Ride sharing (incentives for carpools, vanpooling, set up programs to encourage high occupancy vehicles through

- specific incentives and policies, etc.).
- (2) Transit use (utilize flexible subsidies and fringe benefits, locate transit stops strategically, etc.
- (3) Alternative styles of transportation (encourage bicycles, motorcycles, walking, consider market rates for employee parking, promote off-peak trips, etc.
- (4) Convenient pedestrian circulation on-site (quality design of walkways, consider trams, create parking zones, cluster uses sharing customers, etc.
- (5) Efficient use of parking (supply a mix of short-term and long-term parking, cluster uses sharing parking minimize reserved spaces, consider permits, etc.).
- (6) Effective management (assign administrative responsibility for program to one person, section or company, achieve consistency in policy and enforcement, undertake periodic monitoring, file update reports with City, review impact of new tenants, etc.).

To use the model, take the following steps:

- Verify that all uses on site have equal access to all parking spaces on site, that there are cross access easements across all property lines, and that there are no legal impediments to sharing the parking.
- 2. List all uses on the site.
- 3. Parking Required: Calculate the parking required for each use according to the ratios in the Code.
- 4. Adjust for transit, trip reduction, captive market or surplus need effects; if you change the model, state your assumptions clearly.
- 5. Group the uses according to the categories in Table I.
- 6. Add up the total number of spaces required for each group.
- 7. Multiply that number times the percent shown in the Tables III ("80" means 80% or .8 of the Ordinance Code requirement) for each hour for each group.
- 8. Add up the total number of spaces needed by hour of day.
- Parking Demand: Find the maximum number of spaces needed by hour of day: this will represent the minimum number of spaces that the particular mix will actually need.
- 10. Parking Provided: Add between 5% (for larger sites with stable Demand throughout the year) and 10% (for small sites with a Demand that fluctuates throughout the year) to the Parking Demand to get a realistic estimate of the amount of parking you should provide for this mix of uses.

Admittedly, these steps are laborious without aid of a computer. A program can be written in about one working day, or you may purchase a diskette copy from the Planning Department if your computer uses HPWORD and LOTUS.

Table I Categories of Use

Bar/Club: bar, nightclub, lodge

Bowling/Spa: bowling alley, health club, spa

Church: church, mortuary

Commute: day care, self-serve car wash, convenience store/gas sales

Conference: conference, high/trade schools

Entertainment: amusement park, arcade, courts (tennis, raquetball, etc.), mini-golf,

pool-hall, team sports (volleyball, softball, etc.)

Golf: golf course, driving range
Hospital: hospital, nursing home
Hotel: hotel, bed and breakfast
Industrial: manufacturing, warehousing

Office: general office, medical office, junior/elementary Schools

Residence: boarding house, fraternity/sorority, mobile home/trailer, multi-family,

single-family

Restaurant: indoor and outdoor dining

Retail: auto sales, bank, automatic car wash, furniture sales, museum,

indoor and outdoor retail

Stadium: stadium theater: theater

Table II A Percent of Ordinance by use and hour

The following table shows the percent of the total parking required by Ordinance for each group of uses, by hour of day, for the normal weekday: Monday morning though late Friday afternoon.
